126 0725 1
127 0726 1 Terminate recovery mode. This routine closes the journal file
128 0727 1 being used to recover and re-opens it to record subsequent
129 0728 1 typein. On VMS this is not needed because the journal file
130 0729 1 was opened for input/output.
